

Our Clients

Hedin Environmental was founded by Dr. Robert S. Hedin in 1994 and is located in Mt. Lebanon, PA. The firm specializes in the assessment and remediation of polluted mine drainage, primarily by passive treatment techniques. Our clients include watershed organizations, townships and municipalities, non-profit organizations, mining companies, insurance companies, law firms, engineering firms, and state and federal agencies.

Our Expertise and Services

Hedin Environmental is a small professional organization. Our professional employees have 50 years of combined mine drainage experience. Our primary services are related to the restoration of polluted mine drainage. Project activities include: mine discharge characterizations, watershed assessments, stream restoration plans, the design, permitting, and construction of passive treatment systems. Passive treatment is an evolving science and Hedin Environmental is on the cutting edge of technology development. When appropriate, we implement innovative technologies into our restoration plans and projects.

Our Staff

Hedin Environmental has a full-time staff of professionals as well as several part-time employees. Our employees are based throughout the state to provide timely and personal service to all clients, regardless of location. Our full-time staff includes:

Dr. Robert S. Hedin, President
Theodore Weaver, Project Manager and Geologist
Neil Wolfe, Project Manager and Geoscientist
George Watzlaf, Environmental Engineer
Kelly Long, Office Manager

Individual resumes of our staff members are available upon request.

Our Projects

Hedin Environmental has designed 30 passive treatment systems, completed 10 comprehensive stream restoration plans, and has provided technical assistance for many dozens of mine drainage projects. Our Marchand Mine passive treatment system (Westmoreland County, PA) won a Governor's Award for Environmental Excellence in 2008. Our Anna S Mine Passive Treatment Complex is the largest passive treatment project implemented in Pennsylvania and is an important component of the restoration of Babb Creek (Tioga County, PA). A listing of passive treatment systems and examples of restoration plans are available upon request.
